CuHCP

CuHCP | C10300

Cu-HCP is a deoxidized, oxygen-free copper with a low phosphorus content. It features excellent formability, weldability, and brazeability, along with high electrical conductivity.
Its application areas include electrical component parts, base plates for power modules, process equipment manufacturing, and the cable industry.

Electrical Conductivity

Electrical conductivity depends on chemical composition, the degree of cold deformation, and grain size. High levels of deformation and a small grain size reduce conductivity.

Typcial Uses

Telecommunication cables, terminals, clad products, busbars, base plates for power modules, electrical conductors, pressure vessels.

Corrosion Resistance

Copper is resistant to natural and industrial atmospheres, marine air, potable and service water, non-oxidizing acids, alkaline solutions, and neutral saline solutions.
Copper exhibits low corrosion resistance in environments containing ammonia, halogenide, cyanide and hydrogen sulfide solutions and atmospheres, oxidizing acids, and seawater (especially at high flow rates).
