

CuNi18Zn20

CuNi18Zn20 | C76400

C76400 is a nickel silver that exhibits medium to high strength, excellent stiffness, good formability, corrosion resistance, and solderability. It is a suitable alloy for connectors and relays. Its excellent corrosion resistance allows for use in harsh environments.

Fabrication Properties		
Machinability	less suitable	
Electrolytic Coating Feature	excellent	
Soft Soldering	excellent	
Gas shield arc welding	excellent	
Laser Welding	fair	
Cold Formability	excellent	
Resistance welding	excellent	
Hot-dip tinned properties	excellent	

Electrical Conductivity

Electrical conductivity depends on chemical composition, level of cold deformation, and grain size. High levels of deformation and small grain size reduce conductivity.

Typcial Uses

Relay springs, glass hinges, connectors, components for the watch industry, pressure diaphragms, cutlery, and various parts for electronic and optical instruments. Parts manufactured through pressing, folding or bending, and cutting.

Corrosion Resistance

Nickel silver materials are resistant to atmospheric effects, organic compounds, and neutral and alkaline saline solutions.

Nickel silver materials are not resistant to oxidizing acids and aqueous ammonia solutions.
